**USER OPERATION MANUAL - CURTAINS**

The curtains on manual tracks at Banksia Project are hand drawn by using the flick sticks attached to the end of the curtain. Gently pull the flick stick in the direction of the curtain until you have the curtain in the position desired.

**What are flick sticks?**

Flick sticks, also sometimes known as (curtain) wands, are slim poles usually made from plastic, fibreglass or metal that can be used to open and close curtains, without having to pull the fabric by hand. This can be useful if you have delicate or light-coloured curtains that are going to show marks easily.

Because the flick stick needs to be attached to the curtain, it is not suitable for use with eyelet, tab top or rod pocket curtains. Any curtain that has header tape attached, runs along a track or hangs from curtain rings, will be able to have a flick stick attached to it.

Flick sticks can sometimes also be used to operate blinds, but this depends on the type of blind and the way it is manufactured. Most blinds that can be operated in this way will come complete with flick sticks.

**How do I care for my flick sticks?**

Flick sticks should not need much looking after, apart from some dusting and the occasional wipe with a damp cloth to get rid of surface dirt. Make sure that you hold the flick stick away from the curtain(s) when cleaning, to avoid getting chemicals or fluids on your curtain material.

**USER OPERATION MOTORIZED - CURTAINS**

Motorised curtains are programmed by the automated home control system. Please ensure you ONLY operate the opening and closing of the Motorised curtain via the home automation system. DO NOT MANUALLY DRAW THE CURTAIN CLOSED OR OPEN.

The motor is programmed to be operated ONLY through the home control system.

Should there be any issues with respect to the operation of the motor please contact KAST AUSTRALIA for a service call.
